Make thoughtfully.

Graypants invests in innovative ideas that help create meaningful jobs. We believe our products have stories that transcend their designs. The stories are about the process and the people who take great pride in the quality of their work that goes into each and every one of our light fixtures. Design really does matter, it matters to the individuals who carefully assemble and craft each piece. It matters to all of us.

Design in the end is really about people. Our products are an extension of the people, the faces and the stories behind them.

Just as our flagship line was inspired by available materials, our forms have always been inspired by the natural environment around us.

scraplights®

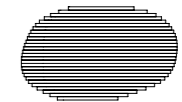

The latest addition to the Scraplights collection takes forms from pebbles gathered at three beaches near Seattle, the cold and weathered home of our design studio.

Each pebble shade is inscribed with the beach name and coordinates of the original stone that inspired it.

Handcrafted from recycled cardboard, Graypants' flagship Scraplights provide warm, intimate, and functional lighting for any occasion or space. Tough and elegant, each is precision cut with a laser and assembled by hand using non-toxic adhesive, and all Scraplights are treated with a non-toxic fire retardant.

Darkened laser-cut edges

White

Layers of a custom-made cardboard

Light reflecting light

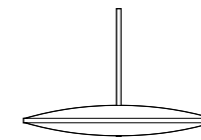

Mimicking the phosphorescent envelope found around stars, Chrona lights create a luminous glow by combining spun brass and diffused acrylic. With a variety of configurations in both horizontal and vertical orientations, Dish pendants can be clustered together to make stunning constellations or individually hung to accentuate any space. Thin, yet robust, the pendants are available in diameters ranging from 6 to 17 inches (14-42cm).

kerflights®

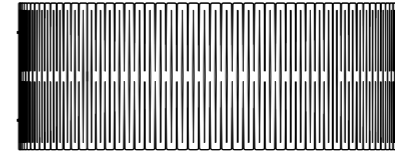

Inspired by tried and true handcrafting techniques, the Kerflights series is precision built to accommodate any situation. Durable powder-coated steel wire frames provide a distinct shape and character for each lamp. The shades are crafted from FSC-certified high quality plywood with a unique kerf pattern cut into the panels allowing for intriguing patterns to be cast onto walls and table surfaces. The magic in the Kerflights series lies within the flexibility of the design. The shade panels are swappable and reversible, allowing for future possibilities over their long lives.

loci

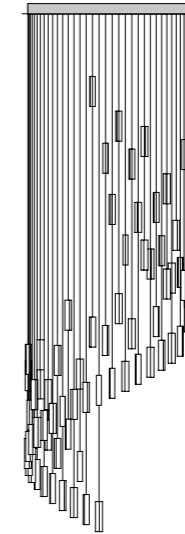

Loci installation at Skyview Lounge, Seattle, WA

Loci, which in Latin means 'centralized sources of power,' refers to the series' innovative method of achieving hundreds or thousands of singular points of light in an installation. Rather than using many individual bulbs, which would consume unnecessary energy and require frequent maintenance, Loci installations are powered by only a small handful of ultra-bright, energy-efficient LEDs.

Pendants are available in acrylic and brass varieties

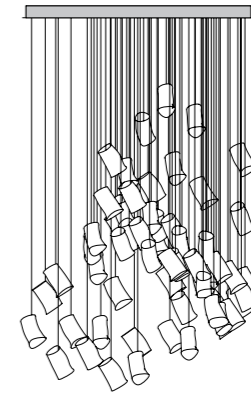

murmurations

Murmurations are custom installations inspired by a breathtaking natural phenomenon. Flocking is considered an emergent behavior arising from simple rules that are followed by individuals without any central coordination. By creating our own simple design rules, we are able to create dynamic light installations comprising of a single layered cardboard pendant. These chandeliers are scalable from few to many pendants and can be customized to accentuate any space.

Murmurations installation at Renaissance Hotel, Seattle, WA

The Prop panel is a perforated steel unit, which can be combined in numerous combinations to create a wide variety of ceiling systems.

The strength of the Prop panels lies in their ability to be endlessly combined into a Prop Ceiling System, accommodating integrated lighting and acoustical needs.

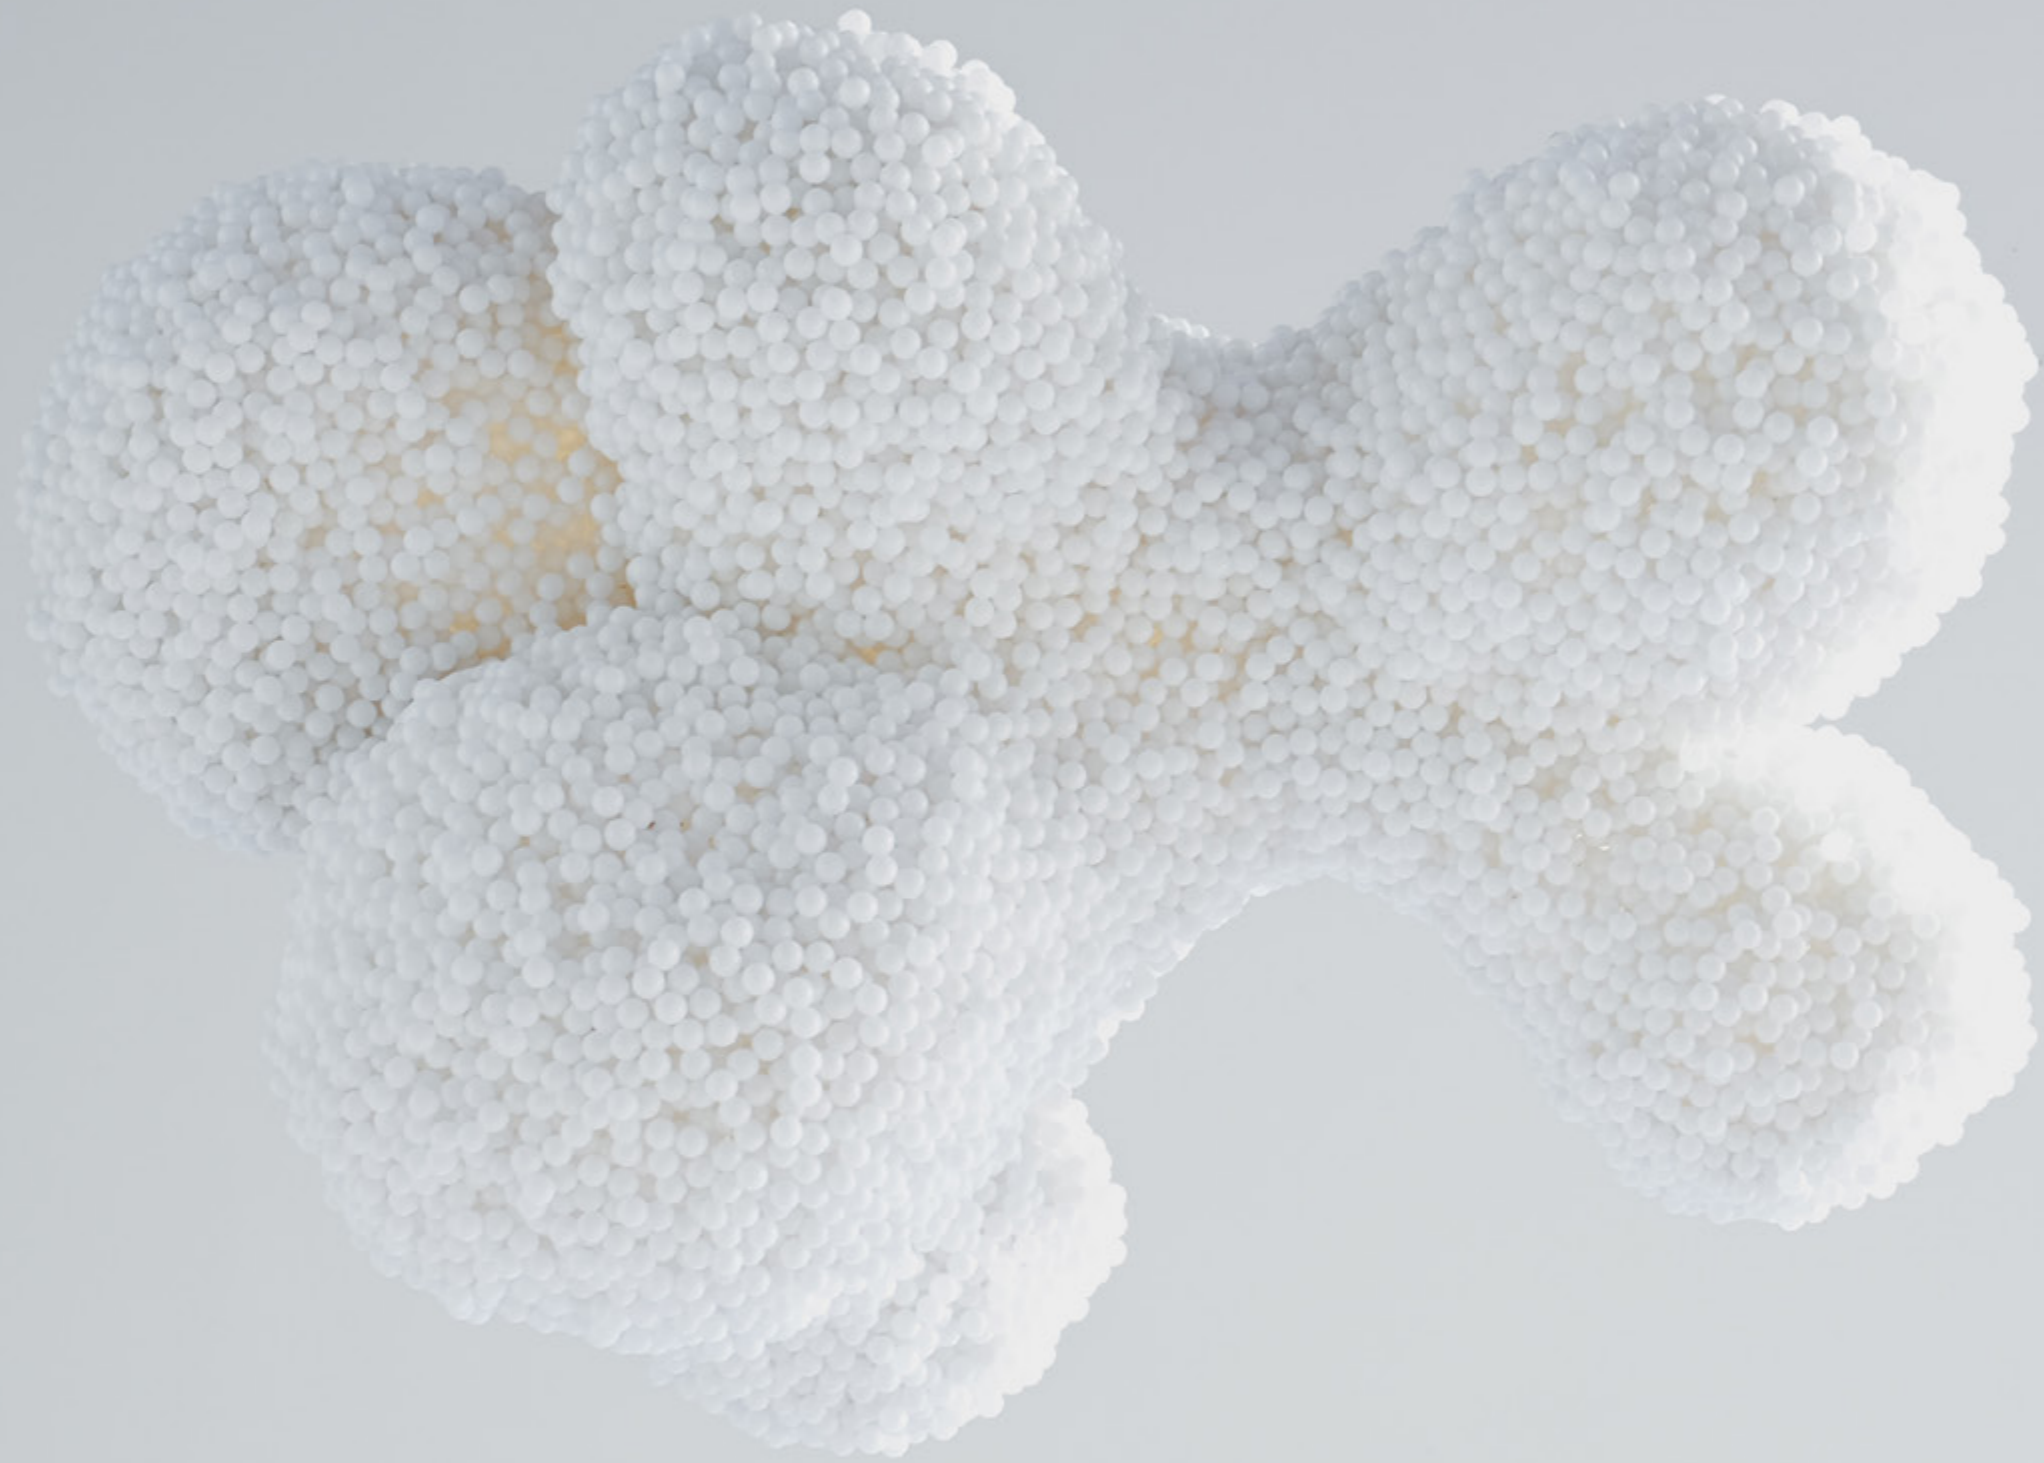

Prop installation in Palo Alto, CA

Two optional inserts are available, to address the lighting and acoustic needs of a space. The first is a lighting insert, a thin LED panel specially fabricated to fit within a Prop. These evenly distribute light and may be synced with building daylight sensors for site-specific dimming. The second is an acoustic foam insert that helps to dampen ambient noise.

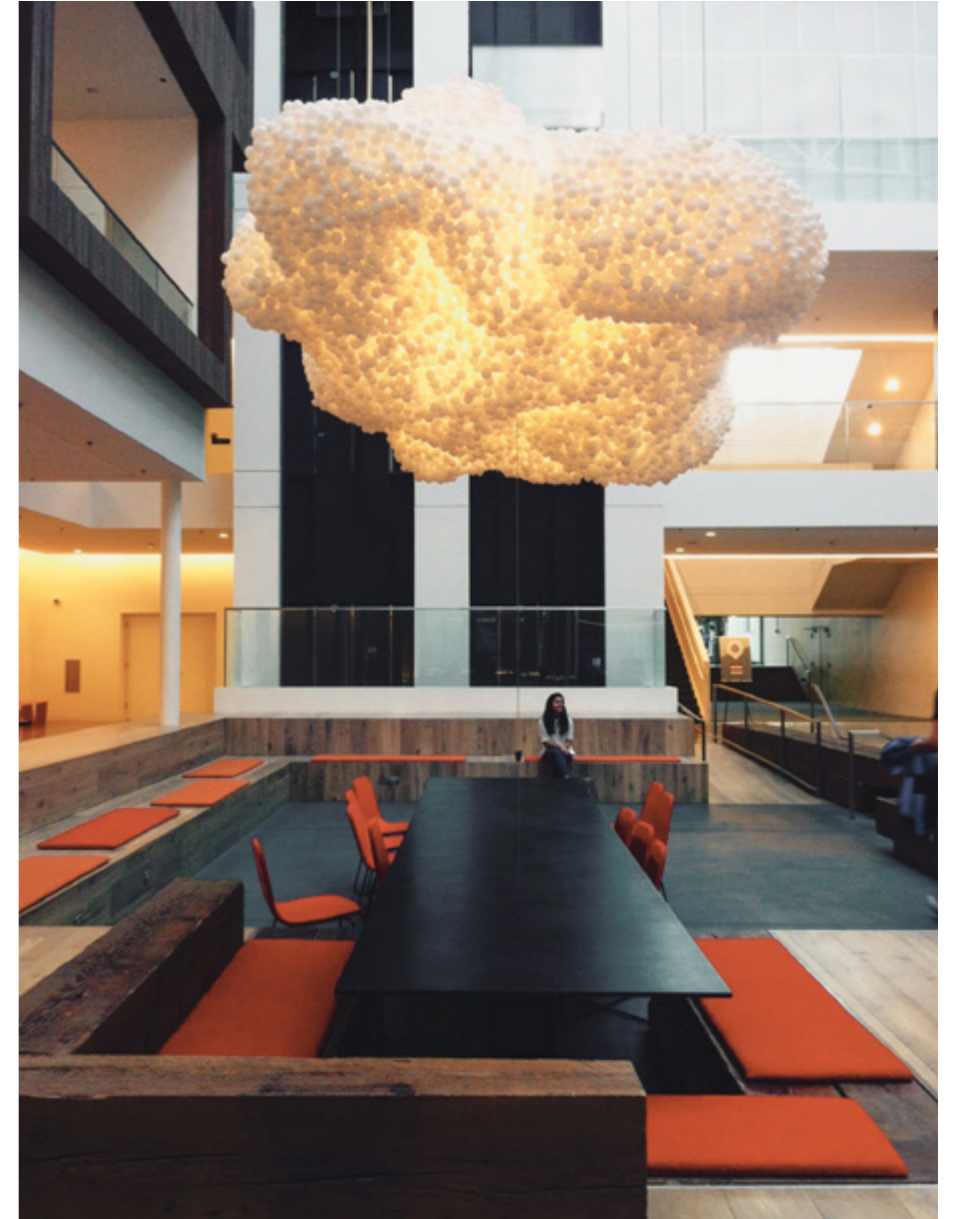

Prop installation at Mathworks HQ, Natick, MA

cloud installations

Graypants' hand-sculpted lighting installation features a programmable light show, concealed by thousands of ping-pong balls. Each Cloud chandelier is designed to be as unique as the environment in which it hangs, providing a window into the Pacific Northwest.

Cloud installation at AirBnB HQ, San Francisco, CA

Cloud installation at ATLAS Workbase, Seattle, WA

wave panels

Commercial and residential panel partitions should inhabit a space, not divide it. Responsibly crafted from recycled cardboard, Wave Panels re-imagine how we use space. With inherent acoustic properties and stunning visual effects, the multifunctional sculptural panels are custom-designed with varying levels of translucence, yielding privacy without isolation. Wave Panels are also fully compatible with standard ceiling systems, affording an elegant upgrade to acoustic ceiling tiles. Freestanding residential tri-fold room dividers are also available.

Wave Panel installation at Moss Adams, Bellingham, WA

garage

Garage is Graypants' award-winning debut architectural project. Set as a residential cabin, the building is a careful balance of preserving the memory of the existing structure and repurposing the materials extracted from it.

Garage aims to make design mysterious, making mundane tasks of our lives into opportunities that create beauty through joyful interaction. The new becoming a theatre to watch the old before gradually fading away. This space isn't about ordinary, it's about touching on boundaries of what is ordinary.

Classical and modern elements have been merged to celebrate the beauty of everyday interactions, such as entering through the solid Corian sliding speakeasy cabinet, illuminating the stretched canvas walls with a mobile phone, revealing hidden beds beneath wooden floor panels that fold into seating, and lighting the century-old wood burning stove.
